-
Ympäristön lämpötila on korkeampi kuin potilaan kehon lämpötila, mikä aiheuttaa lämpötilan nousun. Tämä voi johtaa lääkkeen imeytymisen hidastamiseen ja vaikutuksen vähenemiseen.
-

INTENDED USE: This chamber is intended to be used for mechanically ventilated patients who are prescribed a metered dose inhaler (MDI). The chamber is left in the ventilator circuit. It is latched in a collapsed position when not administering medication.

The enclosed volume of the chamber enables the propellant in large particles to evaporate, yielding smaller aerosol particles of medication. Smaller particles enhance the efficiency of aerosol delivery through the ventilator circuit and endotracheal tube to the patient. The clinical benefit is improved medication delivery.

- Notes**

• This product is to be used by clinicians experienced in the care of patients on mechanical ventilation.

This chamber is a collapsible holding chamber. It is designed to be left in the inspiratory limb of a 22 mm ventilator circuit.

• This chamber can be used with conventional MDI canisters as well as MDI canisters with integrated dose counters (GloxSmithKline™ type). The counter function is maintained.

• Read the instructions for the chamber and the MDI. Keep them available at all times.

BEFORE EACH USE

Carefully examine the chamber removing any foreign objects and replace immediately if it is damaged or has missing parts.

INSTRUCTIONS FOR USE

- TO INSTALL AEROCHAMBER® VENT CHAMBER IN A VENTILATOR CIRCUIT**
 - Remove the **CAP (A)** and the **CANISTER ADAPTER (B)** are securely in place in the **CANISTER PORT (C)** prior to installing in the ventilator circuit.

- Disconnect the inspiratory limb of the circuit from the ventilator and the **WYE CONNECTOR (G)** of the chamber to the **WYE CONNECTOR (H)** of the endotracheal tube. **INSPIRATORY LIMB (I)** of the **CANISTER PORT (C)** must be on top and distal to the patient.

• **Caution:** Do not have filter contact and moisture exchanger in the aerosol flow path. These items can block delivery of the medication.

- Latch the chamber in the collapsed position by holding the patient distal stationary while gently pushing the **CANISTER PORT (C)** and the endotracheal tube into the **LATCH RELEASE BUTTONS (D)** (click this may occur simultaneously).

- Ensure that the device is fully collapsed and that the **CATCHES (F)** are completely engaged by lightly pulling the ends away from each other. The device should remain latched, if not repeat the latching step.

TO USE AEROCHAMBER® VENT CHAMBER TO ADMINISTER MEDICATION

- Unlatch and expand the chamber:**

- Hold the **WYE CONNECTOR (G)** close to the **CANISTER PORT (C)**.

- Position thumb and index finger of the other hand on the **LATCH RELEASE BUTTONS (D)** and press together until they disengage.

- Remove the chamber distal stationary and gently pull the canister end away from the patient until the **BELLOW (E)** is fully expanded.

- Note:** The chamber can accept virtually all MDI canisters.

For Conventional MDI Canisters: Remove the **CAP (A)** from the **CANISTER PORT (C)**. Ensure the **CANISTER ADAPTER (B)** remains inside the **CANISTER PORT (C)**. Shake the MDI canister immediately as you see the instructions supplied with the MDI. Insert the MDI canister into the **CANISTER PORT (C)**, being careful not to discharge the canister at this time.

For MDI canisters With Integrated Dose Counter (GloxSmithKline™ type): Remove the **CAP (A)** and the **CANISTER ADAPTER (B)** from the **CANISTER PORT (C)**. Shake the MDI canister immediately as you see the instructions supplied with the MDI. Insert the MDI canister with integrated dose counter into the **CANISTER PORT (C)**, being careful not to discharge the canister at this time. The integrated counter will be functional upon activation.

For MDI canisters With Integrated Dose Counter (GloxSmithKline™ type): Remove the **CAP (A)** and the **CANISTER ADAPTER (B)** from the **CANISTER PORT (C)**. Shake the MDI canister immediately as you see the instructions supplied with the MDI. Insert the MDI canister with integrated dose counter into the **CANISTER PORT (C)**, being careful not to discharge the canister at this time. The integrated counter will be functional upon activation.

Hold the chamber in your hand maintaining a straight horizontal position. Hold the canister in a vertical position. Prior to the beginning of inspiration, the chamber will be collapsed.

- Note:** A qualified healthcare professional shall prescribe the number of actuations. Allow several breaths before actuating again.

• **Following treatment,** remove the MDI canister from the chamber. Release the **CANISTER ADAPTER (B)** (if removed and **CAP (A)**).

- Note:** With use, it is normal for the inside of the chamber to appear cloudy due to moisture and accumulation of drug residue.

- Latch the chamber in the collapsed position by holding the patient distal stationary while gently pushing the **CANISTER PORT (C)** and the endotracheal tube into the **LATCH RELEASE BUTTONS (D)** (click this may occur simultaneously).

• Ensure that the device is fully collapsed and that the **CATCHES (F)** are completely engaged by lightly pulling the ends away from each other. The device should remain latched, if not repeat the latching step.

- Notes:**

• The chamber will collect condensate water if left in the expanded position.

• The chamber should be changed at scheduled circuit changes or sooner if it is damaged or has missing parts. Do not clean or disinfect the chamber.

The chamber device can be disposed of with domestic waste unless this product is used in a facility with disposal regulations prevailing in the respective member countries.

• Any serious incident that has occurred in relation to the device should be reported to the manufacturer and the competent authority. In the United Kingdom, the MHRA or the Saudi Food and Drug Authority, as appropriate.

• **Caution:** Do not use the chamber if the device is damaged or has missing parts.

• **Caution:** Do not use the chamber if the device is damaged or has missing parts.

• **Caution:** Do not use the chamber if the device is damaged or has missing parts.
